

Configuring Gmail for e-commerce emails

Important: Do not use your CI Student email account for setting up your ecommerce emails (if you have one). There are restrictions on student email accounts that will block sending emails from working. Instead, use your personal Gmail or set up a new Gmail account for this project.

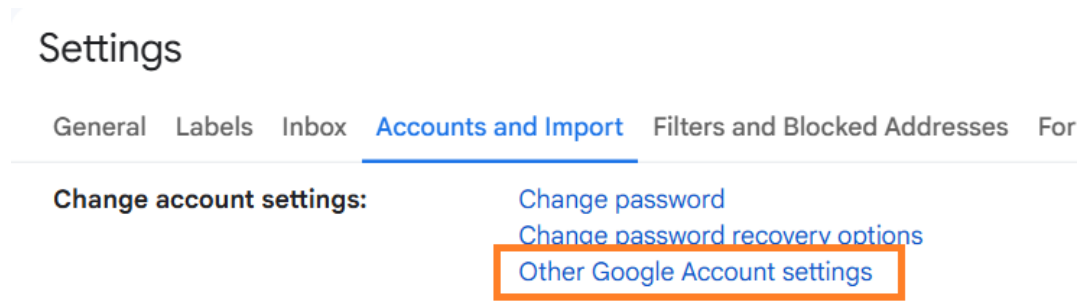

1. Log into your Gmail account. Then click the **cog icon** to open Settings, and select **See all settings**.

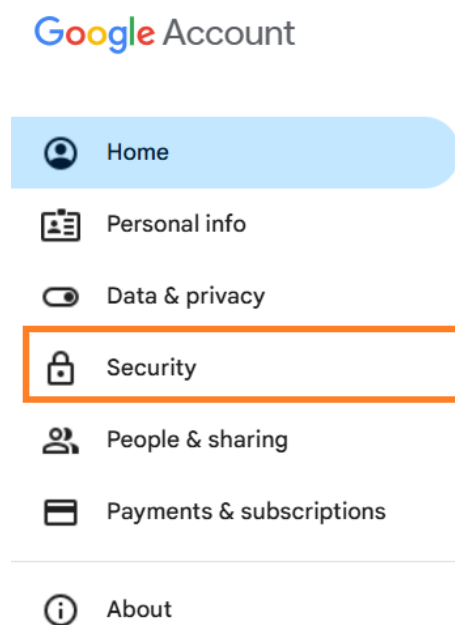

2. Click **Accounts and Import** from the top nav.

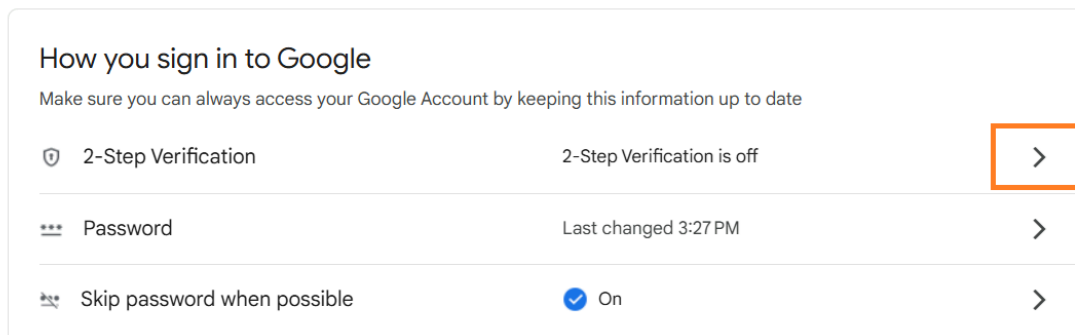

3. Click **Other Google account settings**.

4. Click the **Security** tab.

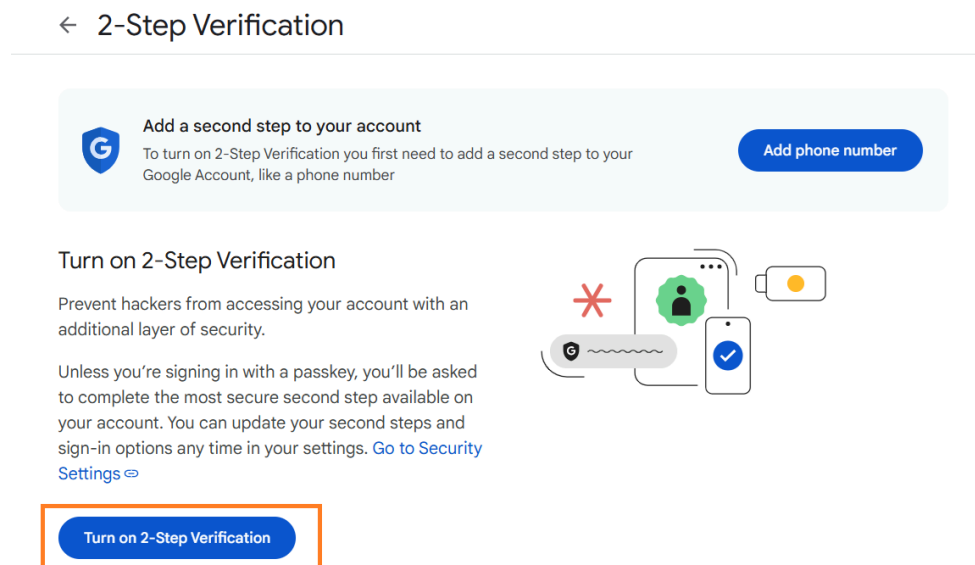

5. Here we'll turn on 2-step verification, which will allow us to create an app password specific to our Django app. The password will allow it to authenticate and use our Gmail account to send emails.
Note: If you already have 2-step verification turned on, skip to step 9.

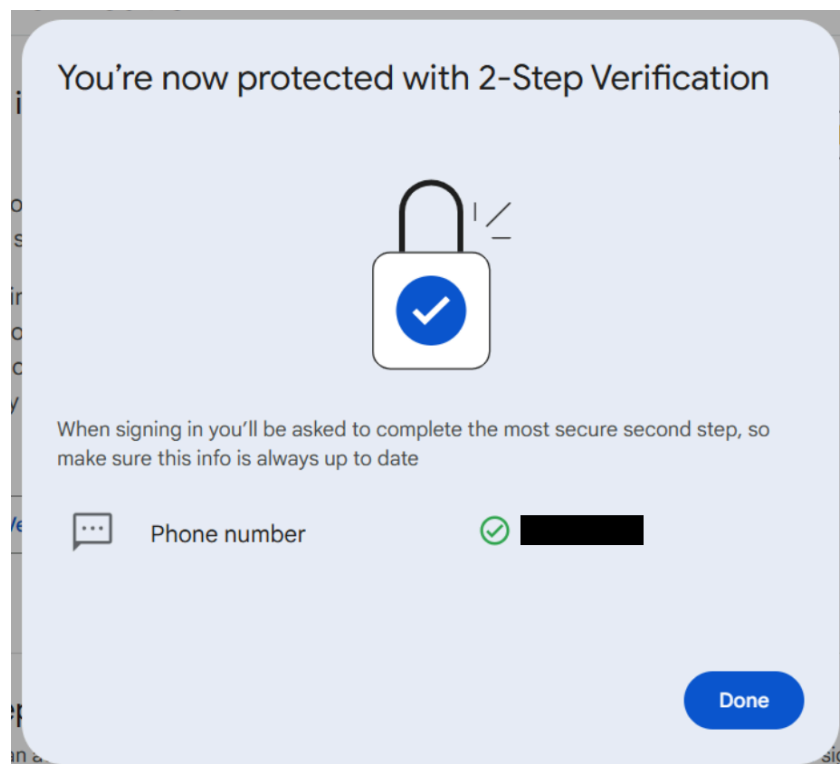

6. Click **Turn on 2-Step Verification**.

Note: If your phone number is not connected to your account yet, you will need to add one first using the **Add phone number** button.

7. Click **Done** to close the verification window.

8. Click the arrow to return to the previous menu.

← 2-Step Verification

Your account is protected with 2-Step Verification

Prevent hackers from accessing your account with an additional layer of security.

Unless you're signing in with a passkey, you'll be asked to complete the most secure second step available on your account. You can update your second steps and sign-in options any time in your settings. [Go to Security Settings](#)

[Turn off 2-Step Verification](#)

9. In the search bar at the top of the page, enter **App passwords**, then select the suggested option.

10. Enter an app name, then click **Create**.

← App passwords

App passwords help you sign into your Google Account on older apps and services that don't support modern security standards.

App passwords are less secure than using up-to-date apps and services that use modern security standards. Before you create an app password, you should check to see if your app needs this in order to sign in.

[Learn more](#)

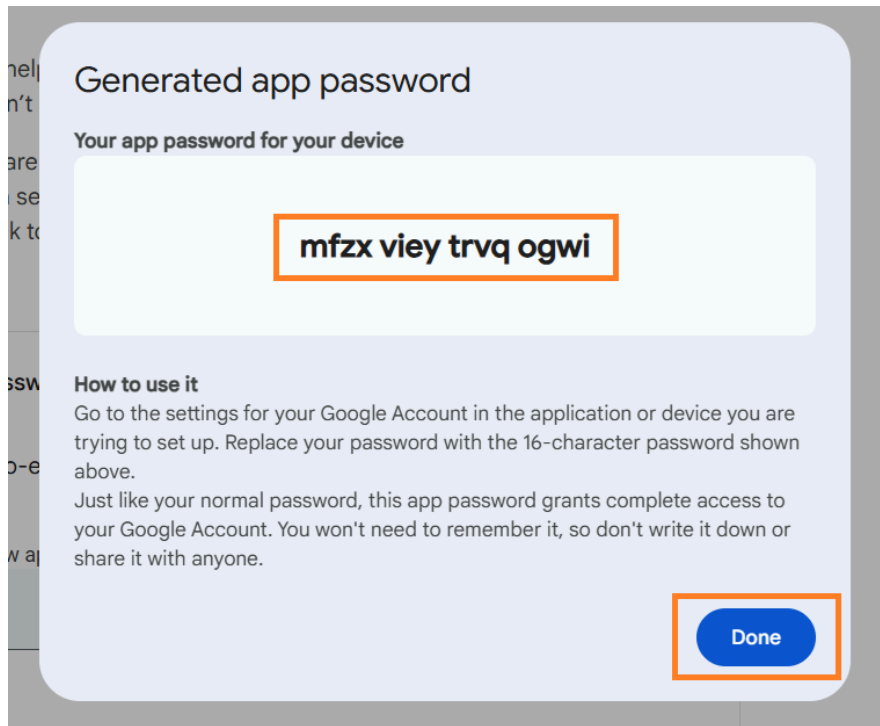

You don't have any app passwords.

To create a new app specific password, type a name for it below...

App name
boutique-ado-emails

Create

11. Copy the generated app password, then click **Done**.

Congratulations on successfully accessing your 16-digit email password!
